

The figure consists of 12 vertical grayscale photographs arranged in a single row, labeled 1 through 12 from left to right. Each photograph shows a different stage of a plant's development. The first image (1) shows a small seedling with two leaves. As the images progress, the plant grows taller, its leaves become larger and more numerous, and it develops a more complex root system. By the final image (12), the plant is a mature, well-developed specimen with many large, dark leaves and a thick, woody stem.
